

Implementing embedded security at late-stage development with IAR Embedded Secure IP

Adding security at the late stages of product development just got a little easier. IAR Embedded Secure IP enables active IP protection and prevents cloning, without having to rebuild the code base.

Anti-cloning & Active IP Protection

Small memory footprint

Compatible with 3rd party libraries and secure boot management mechanisms

Secure manufacturing with zero-trust

Flexible security design at late development stage

Data obfuscation

Program encryption

Certificates and keys
